

# BIS PRODUCT CERTIFICATION SCHEME-I (ISI MARK) MANUAL

## STANDARD OPERATING PROCEDURE FOR DOMESTIC PRODUCT CERTIFICATION

Scheme-I is the premier product certification scheme operated by BIS under the BIS (Conformity Assessment) Regulations, 2018, granting licensees the right to affix the iconic ISI Mark on conforming goods.

### STAGE-BY-STAGE LICENSING PROCESS

| Licensing Step            | Action Required                                                       | Responsible Party | Timeline          |
|---------------------------|-----------------------------------------------------------------------|-------------------|-------------------|
| 1. Application Submission | Online filing on Manakonline with test report & factory layout        | Manufacturer      | Day 1             |
| 2. Document Scrutiny      | Scrutiny of manufacturing machinery, test equipment, staff competency | BIS Officer       | Within 10 days    |
| 3. Factory Audit          | Physical audit of factory production control & quality manual         | BIS Auditor       | Within 20 days    |
| 4. Sample Testing         | Testing of drawn samples in BIS Central/Regional lab                  | BIS Laboratory    | Within 30-45 days |
| 5. Grant of Licence (GoL) | Issuance of CM/L licence number and marking agreement                 | BIS Head Office   | Within 60 days    |

### MARKING FEE & MINIMUM MARKING FEE (MMF)

Every licensee pays an annual marking fee calculated as a percentage of production or unit rate, subject to a prescribed Minimum Marking Fee (MMF) paid in advance.

## RENEWAL OF LICENCE (ROL) AND CHANGE IN SCOPE

- **Renewal of Licence:** Granted for 1 to 5 years upon submission of certified annual production figures, marking fee clearance, and satisfactory performance in surveillance audits.
- **Inclusion of New Varieties / Scope Extension:** When a licensee wants to add new models/sizes under an existing standard, an application is submitted online with internal test reports; verified by sample testing or document scrutiny.

## SURVEILLANCE REGIME UNDER SCHEME-I

BIS carries out two types of surveillance during the licence lifecycle:

- **Factory Surveillance:** Unannounced audit to check test records, calibration of gauges, and quality of incoming raw materials.
- **Market Surveillance:** Secret purchase of open-market samples by BIS officials to independently verify retail quality and prevent sub-standard batches from reaching consumers.
