

BIS SCHEME-IV BATCH & LOT CERTIFICATION PROCEDURES

GUIDELINES FOR CONSIGNMENT INSPECTION & CERTIFICATE OF CONFORMITY (COC)

Scheme-IV is designed for single production batches or imported consignments where a continuous factory certification licence is not feasible. Applicable to structural steel lots, high-pressure gas cylinders, industrial chemicals, and custom machinery.

SAMPLING AND LOT ACCEPTANCE CRITERIA

- BIS inspector draws statistically randomized samples from the identified lot as per IS 2500 (Sampling procedures).
- Samples are sealed and sent to a BIS Central/Regional lab for destructive and non-destructive testing.
- Upon full compliance, a Certificate of Conformity (CoC) is issued specifically for the inspected lot/quantity.
